## Profile

[in linkedin.com/in/rizhenkov](https://www.linkedin.com/in/rizhenkov)

## Summary

As an experienced Full-stack Developer with expertise in PHP, Node.js and Vue.js, I have a comprehensive understanding of software development: from drafting tech requirements to deploy and maintenance.

I am committed to delivering high-quality, scalable solutions to drive technological advancements and achieve company goals.

## Recent Work Experience

**Entytech OÜ** **Jul 2024 - Present**  
Team Lead, Senior Full-stack Programmer Tallinn, EE - Remote  
[🌐 https://enty.io](https://enty.io)

I joined Entytech as a hands-on Team Lead, tasked with building a new technical team to develop and support a new service within the Enty platform. My strong performance and deep expertise quickly earned me a reputation within the team, allowing me to influence the project's architecture and overall code quality.

- Designed the architecture for key features, including a document editor and converter based on Google Docs API, an email status tracking system, an AI-powered documents generator, and a two-factor authentication (2FA) system.
- Investigated and resolved several critical production issues that were previously been unresolved, significantly enhancing the product's stability.
- Proposed and implemented the Architecture Decision Records (ADR) process, establishing regular discussions on architectural topics. This improved decision-making speed, boosted team alignment, enhanced modularity, reduced the number of bugs, and simplified the integration of new UI components.
- Introduced automated feature branch builds, removing the need for merging into a shared test branch. This sped up feature delivery for testing and reduced developer dependencies.
- Led the adoption of AI-powered tools such as Aider and Copilot for automating routine tasks, performing code reviews, and writing documentation, which accelerated development.
- Integrated the Tailwind CSS utility framework, streamlining styling and improving the customization of UI components.

**Metro OTC LLC. (ex OTC Stores LLC.)** **Jun 2021 - Mar 2024**  
Senior Full-stack Developer NJ, United States - Remote

Led successful launch of four projects, optimized development processes and infrastructure. While maintaining active involvement in full-stack development, I also occasionally acted as a Team Lead.

- Enhanced and maintained a complex Symfony project and few Vue projects in the OTC sector, implementing new features, conducting refactoring, and optimizations.
- Successfully migrated production from Symfony 5.4 and PHP 7.2 to Symfony 6.4 and PHP 8.1.
- Led the transition from a monolithic to a API-focused microservices architecture
- Developed a customizable modular e-commerce engine on Nuxt 3 (utilizing Layers technology) and deployed multiple instances on it.
  - Created the VanKeeper application for inventory management of Mobile sales, enhancing Van-team efficiency.
  - Designed a Chrome extension to semi-automate payments in the partner insurance system, resulting in improved transaction processes.
  - Conducted a dozen interviews and successfully onboarded new team members.
  - Organized and systematized documentation in Notion platform, contributing to enhanced knowledge sharing.
  - Improved development processes by implementing ADR system, GitFlow, detailed Development Workflow, and prioritization framework (RICE).
  - Crafted technical requirements and specifications for new projects, ensuring alignment with business objectives and technical feasibility.

**Other companies** **Jul 2009 - Jan 2023**

The comprehensive list of companies I have worked for since 2009 can be viewed in the complete electronic version of my CV.

## References

**A. Lifshiz (ex-chief, after 7 years co-op)**  
in his recommendation letter (in part):

*"I recommend inviting Artiom to participate in projects of any difficulty. He is a highly organized, reliable and very strong specialist who can not only complement any team, but also lead it."*

## Code Examples

### DDD Module implementation

[🌐 https://gitlab.com/rizhenkov/interview-task-backend](https://gitlab.com/rizhenkov/interview-task-backend)

Invoice module with approve and reject system as a part of a bigger enterprise system (Laravel). Approval module exists and you should use it.

## Skills

### PHP

Proficient

Symfony, Laravel, SOLID, KISS, DRY, DDD

### JS/TypeScript

Proficient

TypeScript, Node.js, Vue.js 3 (Composition API), Nuxt 3, Nest.js

### Other related skills

CI/CD, Autotests, Linux, Serverless, RESTful, GraphQL, AWS, Docker, Leadership Skills

## Certifications

### PHP, JS, CSS

In the Top 5% of "LinkedIn Skill Assessment" test takers

## Education

### Software Engineering in Management 2010 - 2013

The Minsk Institute of Management

## Languages

### English

B1

### Russian

Native

### Polish

B2
